

Information Bulletin

Accessory Buildings

Prince Edward Island

## Building Code

The City of Summerside has adopted the 2005 Edition of the National Building Code of Canada as the minimum standard of construction in the City.

A Building Permit is required before an accessory building is constructed so that the City can help you to ensure that it is built to meet code requirements.

In order to obtain a building permit, you must fill out an application form describing the work and submit enough information to allow the City to assess code compliance. This brochure was designed to help you, the owner/contractor understand what information is required.

Please check with the City early in the process to determine if any other City bylaws or regulations are applicable. Once any other approvals are obtained and all the information is submitted, it may take a few days or more to review your application and issue a building permit.

## Plan Requirements

The following information must be submitted with the building permit application for an accessory building:

- site plan drawn to scale showing:
  - lot dimensions
  - location of existing buildings
  - location and size of proposed accessory building.
  - setback to property lines
  
- structural plan showing:
  - size and location of lintels
  - size and location of footings and foundation walls
  - size, spacing and location of roof trusses or joists

- detail drawings or information showing
  - cross section through walls indicating construction details
  - window and door opening sizes
- other information showing
  - height above grade
- other information required to determine code compliance
- property number ( found on property tax bill)
- square feet/meters of building project

## **Fees and Inspections**

**T**he fee for a building permit is \$15.00 plus \$3.00 per \$1000 of construction value over \$5000. Please display the building permit in a prominent location on the work site.

Inspections are scheduled by the City at the following points of construction:

- when all work is complete

Please advise the Building Inspector three days before the inspections is due. Other inspections may be carried out depending on the project complexity and staff workload.

## **Building Codes**

**I**n ancient Babylonia, one of the articles in the Code of Hammurabi stated that if a house collapses, the builder shall be slain. So building codes are not new although modern building codes are less hazardous to the health of builders. Modern codes appeared after the widespread loss of life and property in the latter part of the 19<sup>th</sup> Century in North America. Building Codes help to ensure health, safety and welfare of citizens by:

- reducing potential fire hazards.
- allowing occupants time and facilities to safely exit a building in an emergency.
- requiring certain buildings to be barrier free.
- regulating structural soundness of buildings.
- reducing property loss from fires.

The National Building Code was developed to ensure that uniform standards would be used across the country which reduces building costs by allowing large scale manufacturing.
