

Part 9 Buildings

Building Permit Process

The City of Summerside has adopted the 2005 Edition of the National Building Code of Canada as the minimum standard of construction in the City.

A Building Permit is required before a building or part thereof is constructed, altered, demolished or changed from one major occupancy type to another.

In order to obtain a building permit, you must fill out an application form describing the work and submit enough information to allow the City to assess code compliance. This brochure was designed to help you understand what information is required.

Please check with the City early in the process to determine if any other City bylaws or regulations are applicable. Once any other approvals are obtained and all the information is submitted, it may take a few days or more to review your application and issue a building permit.

Plan Requirements

The following information must be submitted with the building permit application for a Part 9 Building:

- site plan to scale indicating:
 - the location of the building
 - lot dimensions
 - services on the site
 - proposed driveway access and parking
 - setbacks to property boundaries
 - signage where applicable

- floor plans to scale indicating
 - proposed use of each room or area
 - door locations and swings
 - fire alarm and suppression systems where required
 - emergency and exit lighting where required
 - barrier free design elements

- structural plans indicating
 - foundation plans and details
 - truss plans and details
 - structural framing plans and details

- cross sectional details indicating
 - structural and finish details
 - handrails and guards
 - fire ratings

- location of buildings on adjacent sites and exterior elevations where necessary to determine the limiting distance
- other information as required to determine code and bylaw compliance including plans sealed by a professional designer for components of Part 9 buildings where required in the building code
- square feet/metres of building project
- property number (found on property tax bill)

Fees and Inspections

The fee for a building permit is \$15.00 plus \$3.00 per \$1000 of construction value over \$5000. Please display the building permit in a prominent location on the work site.

Inspections will be carried out by the City at a number of points during construction. These will be identified when the permit is issued. Please advise the Building Inspector three days before the required inspection is due.

Building Codes

In ancient Babylonia, one of the articles in the Code of Hammurabi stated that if a house collapses, the builder shall be slain. So building codes are not new although modern building codes are less hazardous to the health of builders. Modern codes appeared after the widespread loss of life and property in the latter part of the 19th Century in North America. Building Codes

help to ensure health, safety and welfare of citizens by:

- reducing potential fire hazards.
- allowing occupants time and facilities to safely exit a building in an emergency.
- requiring certain buildings to be barrier free.
- regulating structural soundness of buildings.
- reducing property loss from fires.

The National Building Code was developed to ensure that uniform standards would be used across the country which reduces building costs by allowing large scale manufacturing.
